

The BPL issue is of grave concern. as the nations first responders via amateur radio, BPL will result in complete Jamming of the HF frequencies from 80 Mhz down unusable. If BPL was deployed today the FCC would fine the offenders for willful interference.

I cannot believe from a technical standpoint the FCC would let this actually occur. The technical interference problems will be huge. I urge the FCC to not allow BPL due to the interference issues and the technical merits of willful interference generation from 80 Mhz down across broad areas of dense population. this is a disaster of immense proportions. Please listen to the ARRL on this issue. The results of tests in Japan were severe and deployment was not allowed due to technical interference issues.

Thanks for your time and consideration.
